
Counting problem (1)

P35849_en

Given a sequence of n integer numbers $x_1 \dots x_n$, count how many i 's, with $1 \leq i \leq n$, follow the property

$$|\{j : 1 \leq j \leq n \wedge x_j \leq x_i\}| = i .$$

Input

The input consists of several cases. Each case begins with n , followed by the n integer numbers $x_1 \dots x_n$. Assume $0 \leq n \leq 10^5$.

Output

For each case, print the number of indices i that fulfill the condition above.

Sample input

```
4 2 3 5 7
3 -7 -7 -7
2 2 1
```

Sample output

```
4
1
0
```
