## Albums                                                            X34329_en

There are a number of albums that are part of a record label. Print the list of albums in the appropriate format.

### Input

The input starts with an integer *N* denoting the number of albums. The next *N* lines are on the format "<name>–<listed>", where <name> is the name of the album and <listed> equals "Y" if the album is listed, and "N" otherwise.

### Output

For each album in the order they appear in the input, print one line:

Album: XXX [YYY]

Here, XXX is the name of the album and YYY equals "listed" or "unlisted".

### Sample input

```
5
Dark Side Of The Moon-Y
Appetite For Destruction-N
Hotel California-Y
A Night at the Opera-Y
Revolver-N
```

### Sample output

```
Album: Dark Side Of The Moon [listed]
Album: Appetite For Destruction [unlisted]
Album: Hotel California [listed]
Album: A Night at the Opera [listed]
Album: Revolver [unlisted]
```
