## Add one day                                                  X54560_en

Write a program that reads a sequence of dates, and adds one day to each of them.

### Input

The input is a sequence of dates. Each date is formed by three integers: day, month, and year. None of the given dates will belong to a leap year.

### Output

For each date in the input, the date of the next day is printed. Follow the format of the examples.

| Sample input | Sample output |
|---|---|
| 23 04 2002 | 24 04 2002 |
| 31 05 1999 | 01 06 1999 |
| 28 02 2017 | 01 03 2017 |
| 01 12 1878 | 02 12 1878 |
| 31 12 2006 | 01 01 2007 |
