
3D Distance

X72496_en

Write a function *distance3d* that returns the Euclidean distance between two given points in 3D space. Each point is specified by its 3 float coordinates: *distance3d*($x_0, y_0, z_0, x_1, y_1, z_1$) returns the Euclidean distance between point (x_0, y_0, z_0) and point (x_1, y_1, z_1) .
