## Word count

X86598\_en

---

Write an integer function *word\_count(s)* that returns the number of words in string *s*. We assume all characters of *s* are letters and spaces. *Warning*: do not use the `split` string method.

### Sample session

```
>>> word_count('Qui invenit amicum invenit thesaurum')
5
>>> word_count('alea iacta          est')
3
>>> word_count('KingKong')
1
```
