
Pythagorean triplets

X91267_en

Write a function *is_pythagorean*(*a*, *b*, *c*) that receives as argument three integers greater than zero and returns `True` when the square of one of these arguments is the sum of the squares of the other two. Otherwise the function returns `False`.

Sample session

```
>>> is_pythagorean(3, 5, 4)
True
>>> is_pythagorean(2, 1, 1)
False
>>> is_pythagorean(13, 5, 12)
True
```
